

LED Plow Lights

Product Info

Cost
\$300/piece

Advantages

- ◆ Much brighter light than traditional halogens
- ◆ Very directional focused
- ◆ Uses a lot less power to run them
- ◆ They have a small forward facing lip to prevent the snow from packing and hanging onto the front of them
- ◆ Operators claim that the reflectivity of the snow is not a problem with these and also note that they can see a lot more with these lights than they can with just the fog lights in low visibility situations

Description

These LED plow lights are mounted onto a District 4 plow truck. They like them so much, that they would like to outfit every truck with them. However, the cost seems to be the deterring factor for them. This particular LED plow light has a very small forward facing lip surrounding the headlight that helps prevent the lights from accumulating snow build-up that other LED plow light companies are plagued with at the moment.
